

Providing direction in environmental regulations, permitting and regulatory compliance for two decades and counting.

Crimson is a Calgary-based company that manages regulatory compliance and provides environmental consulting for upstream and midstream oil and gas operations.

With over fifty years of combined experience, we bring efficiency and expertise to every project. At Crimson we pride ourselves in both meeting our client's goals and maintaining all regulatory requirements. We bring the planning and forethought necessary to prevent rework and regulatory delays for every client and each project.

Crimson has provided clear, concise, and ethical management to clients in Canada and the United States.

The comprehensive service our team provides to our clients is our stock in trade. We take immense pride in remaining well-informed, accurately assessing your needs, and understanding the specific dynamics of your business.

REGULATORY AFFAIRS

Crimson keeps apprised of legislation and regulatory change to ensure our clients are at minimum meeting current requirements. We are fluent in the regulatory process for upstream and midstream oil and gas for the four western provinces, federally in Canada and in some states, including Colorado and North Dakota. Crimson works with our clients to ensure that the proper permits to construct and operate projects are scheduled and in place to facilitate licensing and seamless construction and operation. We maintain relations with all regulators and ensure transparency on all projects.

Crimson also assists clients who have enforcement issues by working through nonconformance concerns in a respectful and successful manner to the regulator's satisfaction.

ENVIRONMENTAL MANAGEMENT

We are specialists in environmental management with a focus on air, water and waste issues. At Crimson we establish management systems to address greenhouse gas, methane and fugitive emissions.

Water diversion, intake, storage, processing and disposal projects are all within our scope. Crimson has successfully partnered with engineering firms to construct leading edge frac water storage and processing facilities, to allow our clients the ability to recycle frac water and eliminating the need for disposal. We maintain ISO 14001 auditing certification to ensure clients have a current environmental management program.

Crimson has a strong expertise in air emissions projects and can complete dispersion modelling, government reporting or any other requirements of our clients.
