REGULATORY CHANGE

Our experienced team can identify necessary licensing requirements and work with you to ensure scheduling, deadlines, budgeting, and regulatory goals are met. We stay in the forefront of regulatory changes and determine impacts on our client's project.

Responsible corporate stewardship and maintaining high standards of sustainability is a necessary part of doing business and are important to our customers and to Crimson. We work with our clients to ensure that the proper permits to construct and operate projects are scheduled and in place to facilitate licensing and seamless construction and operation.

Regulatory requirements are individual to our customers needs and projects. We can assist in establishing a comprehensive regulatory plan, which sets out the complete set of processes to meet reporting thresholds and timelines.

Crimson stays apprised of legislation and regulatory change to ensure our clients are at minimum meeting current requirements. We are fluent in the regulatory process for upstream and midstream oil and gas for the four western provinces, federally in Canada and in some states, including Colorado and North Dakota. We will work with you to remove any regulatory speedbumps for your project.

### REGULATORY COMPLIANCE

Crimson has expertise in a vast array of regulatory requirements including, but not limited to, the following:

- Assessment & planning of regulatory requirements
- Preparation of applications, permits & audit documentation
- Submission of applications, registration and notifications
- Equipment spacing review and guidance
- Regulatory exemption and waiver requests
- Technical writing of process procedures and manuals
- Regulatory and environmental reporting
- Assist in nonconformance and enforcement situations
- Inspection and audits

Your project may require application processes with several regulatory bodies. Crimson will plan a timely and comprehensive approach to regulatory management for your project.

### REGULATORY APPLICATIONS & REPORTING

Crimson is experienced in the application and reporting requirements for the following regulators:

- Alberta Energy Regulator (AER)
- Alberta Environment and Parks (AEP)
- British Columbia Energy Regulatory (BCER)
- British Columbia Environmental Assessment Office (BCEAO)
- Saskatchewan Ministry of Energy & Resources (MER)
- Manitoba Environment
- Canadian Energy Regulator (CER)
- Navigation Canada (NAV Can)
- Impact Assessment Agency of Canada (IAAC)
- Environment and Climate Change Canada (ECCC)

Our staff can research and interpret regulatory requirements from all regulatory bodies.
